About Me

Backend-focused Full Stack Developer building reliable business applications with Laravel and NestJS, from API and database design through frontend integration and production support.

Experience

Full Stack Developer

Jan 2026 – Present

Peng Huoth Group

Phnom Penh, Cambodia

- Deliver end-to-end application features, from clarifying requirements and designing API and data contracts to implementation, frontend integration, testing, and production support.
- Build and support reliable backend services for business applications using Laravel and NestJS.
- Implement RESTful APIs, business logic, and database workflows with clear validation, maintainable code, and strong data integrity.

Backend Developer (R&D Officer)

Jan 2023 – Dec 2025

Wintech Software Development

Phnom Penh, Cambodia

- Pawn System: Architected and developed a robust Loan and Pawn Management System using Laravel as the core framework.
- API Architecture: Designed and implemented secure, scalable RESTful APIs to handle complex financial transactions, pawn collateral tracking, and interest calculation schedules.
- API Documentation: Documented the entire RESTful API enabling smoother collaboration with the frontend team and reducing integration bugs.

Featured Project

localnet-control — Published Developer CLI

Python · Networking · Security · PyPI

- **Problem:** Sharing localhost applications with teammates and mobile devices required repetitive network setup or an external service.
- **Solution:** Built a LAN-First CLI with QR output, request logging, token authentication, IP/CIDR rules, and optional tunnel support.
- **Evidence:** Released as **localnet-control** on PyPI with public source code, command documentation, and release history on GitHub.

Education

Bachelor of Software Engineering

2023 - 2025

BELTEI International University

Technical
